With every bulb order we plan to pack a leaflet with information that will help to make bulb culture successful for you. Make sure that you receive your copy. Kindly note that in some years the skins of Tulips are so hard and firmly attached that the roots cannot push through. This is especially true of some Double Tulips. If you receive a stock with uncracked skins, it will pay you to break off a portion of the husks before planting.

# Perry's Narcissi or Daffodils

MAILED FREE EAST  
OF THE MISSISSIPPI  
WHEN CASH ACCOM-  
PANIES THE ORDER

"Daffodil" is a common name, best used in referring to Trumpet varieties of Narcissi, that large and varied family of bulbous plants, so easily grown for their early Spring flowers. These are perfectly hardy without protection. Plant these bulbs as early in the Fall as possible so roots may be made before the ground freezes.

All the Narcissi listed on this page, except the Poet's Grand Soleil d'Or, Chinese Sacred Lily and Paperwhites, are suitable for forcing and are very extensively used for this purpose. Soil is preferred as a medium in which to grow them and bonemeal the best fertilizer.

## Save a Year by Renewing Your Lawn this Fall

Many a good lawn has just about been ruined by the heat and drought of this past Summer. It is probable that a considerable number will have to be entirely re-sown, else with the return of rains, a plentiful crop of weeds will spring up and produce an unsightly appearance.

Fall is the ideal time for re-seeding as more favorable conditions for success exist than at any other season. The soil is still warm and the seed will germinate quickly and continue to thrive until the ground freezes solid. There is little danger from frost to September and October sown lawns. True, weeds may also pop up but most of them are annuals that frost will kill.

Japanese Beetles are becoming a serious menace in this vicinity. Their grubs feed on grass roots during September and October. As insurance against this damage all newly built lawns should have 8 to 10 lbs. of Arsenate of Lead thoroughly worked into the top-soil of each 1000 sq. ft. of area. This should be done before seeding and can be accomplished by raking.

For fertilizer we recommend Loma, 5-10-4 broadcast at the rate of 25 lbs. per 1000 sq. ft.

### FRANKLIN PARK Lawn Seed

THE BEST MIXTURE FOR SUNNY LAWNS

Every good lawn begins with good seed. Franklin Park Lawn Seed is good seed. It is blended fresh every season from heavy, re-cleaned, live seeds of only those grasses known to be adapted to our soils and climate. A small amount of White Dutch Clover is included. It is free from worthless chaff. It is high in germination as tests will prove. It is recognized as a quality mixture for those who want the best. Under ordinary conditions 1 lb. (1 qt.) is sufficient to properly seed 250 to 350 square feet.

### Perry's SEASHORE Mixture

Sandy soils are benefited by the addition of clayey soil, peat moss and other organic matter resulting from the use of Wizard Brand Cattle and Sheep Manures, as grass will not grow well in pure sand. In order to keep the seaside lawn in good condition, it should be watered liberally and also receive an occasional application of our sterilized Sheep Manure. Sow 1 lb. to every 250 sq. ft.
